

ATTACHMENT A
Amendments to the Specification

Please replace the paragraph at page 7, lines 9-11 with the following amended paragraph.

B1 A first third actuator 24-27 is mounted between the squab 16 and the back rest 18 in order to provide the movement of the back rest between its raised position and its folded-down position.

Please replace the paragraph at page 10, lines 12-19 with the following amended paragraph.

B2 In parallel with the test carried out on the actuator 27 acting on the back rest and the squab, a step 110 of storing the position of the leg rest is formed immediately after the actuator 27 is started up, at step 102. This storage, carried out by the information processing unit 40, relates to the position value measured by the sensor 46 associated with the actuator 26 allowing the movement of the foot rest 22 with respect to the leg rest 20.
